instructor for both of those courses and is now on “indefinite leave.” UBC confirmed that an email was sent to students in CHEM 313 informing them of this instructor change, but referred The Ubyyssey back to its earlier statement quoted in this article when asked whether Sherman was on “indefinite leave.”

This article contains mention of racist stereotypes.

A UBC chemistry professor is under investigation after making comments about race and IQ during class.

On January 19, Dr. John Sherman told his CHEM 313 class that Black people do poorer than white people on IQ tests and that Asians score higher than white people on the same tests. He then questioned if it was racist to ask whether Asian people are smarter than white people and if white people are smarter than Black people based on this statement.

The comments were made during a break in class when Sherman was discussing the semantics of calling something a fact or racist.

“Do you ever know what anyone means when they say someone is racist? ... It can mean all kinds of things,” he said.

Sherman read out a student comment — “I think it’s pretty clear cut” — before talking about the IQ test scores of BIPOC people.

“I don’t think it’s racist [to say Black people do poorer on IQ tests than

[lecture](#) posted on YouTube. "So it is grey ... I think, what's racist and what's not."

A student also posted a transcript to the [UBC subreddit](#).

Sherman said people can “get into a long debate” over whether the difference in IQ test scores is the result of genetics or one’s environment, but still said his comments were facts.

While the exact cause of the [Black-white test score gap](#) remains unclear, a [2012](#) paper in *Education Economics* found that genetic make-up — which is stable throughout peoples’ lifetimes — cannot explain how the score gap “changes fast and even moves in opposite directions depending on grades.”

The reliability of IQ tests to measure intelligence is also questionable. A [2012 study](#) in *American Psychologist* found that IQ tests cannot measure other forms of intelligence such as emotional or social intelligence.

According to the transcript posted on Reddit, students in the Zoom chat called the professor’s comments racist. The chat could not be seen in the video to confirm this.

Matthew Ramsey, director of university affairs at UBC Media Relations, said the university was aware of student concerns in a statement to *The Ubyyssey*.

While Sherman is under investigation, Professor Gregory Dake will teach his CHEM 313 section, according to a screenshot of the [class's Piazza page](#). Dake is also listed as the instructor on [the SSC](#).

The Ubyyssey did not hear back from Sherman in time for publishing.
